— SEE OFFICE ACTION ON THE FOLLOWING PAGES —

1. Claims 1-35 are presented for examination.
2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-35 are rejected under 35 U.S.C. § 103 (a) as being unpatentable over **Seeley et al. (Seeley)** patent no. **6,097,429**, in view of **Aggarwal et al. (Aggarwal)** patent no. **5,943,478**.

4. As to claim 1, Seeley teaches the invention substantially as claimed, including a server (site control unit, SCU 12, figure 1, col. 7 lines 31-59) for making it possible for a remote client (operator from central station, figure 1, col. 7 lines 31-59) to control image sensing means via a network (ISDN figure 1) and for providing a transfer service to transfer video information, which has been captured by the image sensing means, to the client via said network, comprising:

input means for entering a request for information identifying the client to which the video information captured by said image sensing means is transferred (col. 9 lines 6-40).

However, Seeley does not explicitly teach notifying the information identifying the client.

Aggarwal teaches a user A logs in by contacting a Home Server (HS). The Home server notifies status of the user A to members that has the user A on their contact list (col. 2 lines 11-17; col. 5 lines 31-67).

It would have been obvious to one of ordinary skill in the Data Processing art at the time of the invention to combine the teachings of Seeley and Aggarwal to notify whenever the client logs in the server because it would track and report the online status of the client.

5. As to claims 2-4, Seeley teaches said image sensing means is a camera and control of the image sensing means includes optical control and orientation control (col. 9 lines 6-40), and Seeley inherently teaches plurality of clients can receive video information via the network.

6. As to claims 5 and 7, Seeley teaches the invention substantially as claimed as discussed above; however, Seeley does not explicitly teach voice recognition and notification. Official Notice is taken that speech recognition and notification is well known. It would have been obvious to one of ordinary skill in the Data Processing art at the time of the invention to combine the well known teachings with Seeley's security system to allow

user to use voice to input information and receive audio output because it would free user's hands from typing to perform some other tasks.

7. As to claim 6, Seeley teaches information reported includes user names (col. 9 lines 6-40).

8. Claims 8-35 have similar limitations as claims 1-7; therefore, they are rejected under the same rationale.

9. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Le H. Luu, whose telephone number is (703) 305-9650. The examiner can normally be reached Monday through Friday from 7:30 AM to 5:00 PM.
